

Watershed Management Plan

Non-Traditional Agricultural Implementation Project

The creation of the Watershed Management Plan for the Finley River is complete. The document has been reviewed and accepted by the 19 member stakeholder committee that was charged with its development. The goal of the committee is to address the concerns of the entire watershed and its many members and represent them in laying the ground work for the Watershed Management Plan. This document will provide a guideline used for addressing improvement of water quality within the watershed over the long term.

Goals have been set by the stakeholders to include reduction of sedimentation and increased riparian corridor establishment along the river and its' tributaries. To understand more, please review the plan at the above link. If you desire to comment or have a question, contact [Justin Jenkins](#) (417) 581-2718 Ext. 3 or go to the Contact Us page.
